Japan

Dear President,

Ethiopia (the Federal Democratic Republic of Ethiopia) is the second-most populated nation (approximately 91 million people) on the African Continent. Our nation shows economic growth from 8 to 12 per cent each year for the last 10 years and now produces GDP equivalent to 2 per cent of the entire African GDP. We have the headquarters of African Union (AU) in Addis Ababa, and play a key role among African nations.

Currently we work actively to industrialize our nation, having established two Science and Technology Universities under the Ministry of Science and Technology, one of them being Addis Ababa Science and Technology University (AASTU). We are hoping to introduce the excellent technologies Japanese institutes have, and would greatly appreciate if you could send us a talented person. Please refer the attached information from the president of Addis Ababa Science and Technology University and recommend a retired or active professor, or associate professor, who can spend a certain period of time in Ethiopia.

I would greatly appreciate your consideration.

Sincerely Yours,
Demitu Hambisa Bonsa
Minister
